Documentación

Sitio: Jardín Botánico La Laguna, Plan de La Laguna, El Salvador. Sitio original:
<https://www.jardinbotanico.org.sv/>

Es una asociación privada, apolítica y sin fines de lucro, enfocada en la conservación, la educación ambiental y la investigación botánica. Se sostiene con entradas, ventas del vivero y cursos.

Finalidad de la página de inicio: transmitir en pocos segundos la sensación de "refugio verde", motivar la visita y dirigir al usuario hacia las demás páginas: Explora (flora, fauna, actividades, investigación) y Contacto (horarios, tarifas, cómo llegar, formulario).

Público: familias, estudiantes y docentes, amantes de las plantas, turistas y visitantes locales.

2. CONTENIDO QUE DEBE CONSERVARSE

Conserva los textos, datos e imágenes siguientes. Puedes reorganizarlos visualmente, pero no inventar datos nuevos ni eliminar secciones.

HERO

- Título: "Conecta con la naturaleza." (la palabra "naturaleza" resaltada con estilo de acento)
- Texto: "Recorre senderos, descubre especies, conoce nuestra fauna y vive una experiencia de aprendizaje y conservación en el Jardín Botánico La Laguna."
- Botones: "Explorar el jardín →" (a [explora.html](#)) y "Planifica tu visita" (a [contacto.html](#))

¿POR QUÉ VISITARNOS? (Conservación)

TODO LO QUE PUEDES EXPLORAR (4 tarjetas con imagen, etiqueta, título y descripción; cada una enlaza a una sección de Explora)

NAVEGACIÓN Y PIE DE PÁGINA (idénticos en todas las páginas)

Archivos del resto del sitio: `explora.html` y `contacto.html`. Los enlaces entre páginas deben seguir funcionando con esos nombres.

3. IDENTIDAD VISUAL QUE DEBE MANTENERSE

La nueva página debe verse como parte del mismo sitio que Explora y Contacto. Usa exactamente este sistema (se adjunta `styles.css` como referencia):

Tipografías (Google Fonts):

- Display (títulos): 'Baldonse'

El estilo debe sentirse orgánico, fresco y editorial. Puedes proponer mejoras en la composición del inicio, pero sin cambiar paleta, tipografías ni la lógica de componentes.

4. USO OBLIGATORIO DE CSS GRID (REQUISITO CRÍTICO)

La DISTRIBUCIÓN PRINCIPAL de la página debe construirse con CSS Grid. No es suficiente usar Grid solo en una galería, en un grupo de tarjetas o en un componente aislado. Concretamente:

a) El contenedor de la página (por ejemplo `<body>` o un wrapper como `.page`) debe ser un grid con `grid-template-areas` que defina la estructura global: header/nav, hero, información rápida, historia, exploración, CTA y footer.

b) Cada sección grande debe usar Grid para su propia composición con `grid-template-columns/rows` y `grid-template-areas`: la franja de información rápida, la sección "¿Por qué visitarnos?", el bloque de tarjetas de exploración (con tarjetas de distinto tamaño si mejora la composición, usando `grid-column/grid-row span`) y el footer.

d) Responsive: adapta las `grid-template-areas` con media queries (por ejemplo 4 columnas en escritorio, 2 en tablet, 1 en móvil), sin depender de floats ni de posicionamiento absoluto para maquetar.

e) Se permite Flexbox SOLO dentro de componentes pequeños: el menú de navegación, los grupos de botones, los puntos del carrusel y alineaciones internas de tarjetas.

5. FORMATO DE ENTREGA: HTML Y CSS POR SEPARADO

Genera el código en DOS ARCHIVOS separados y en dos bloques de código distintos:

- ARCHIVO 1: index.html → solo estructura y contenido. Enlaza la hoja de estilos. No uses etiquetas <style> ni estilos en línea. Puede incluir el pequeño script del carrusel y del menú móvil al final (o un archivo js aparte).

- ARCHIVO 2: index.css → todo el CSS: variables de :root, reset, tipografías, layout con CSS Grid, componentes, animaciones y media queries. Compatible con el styles.css existente: reutiliza los mismos nombres de variables y clases de la identidad visual (.container, .eyebrow, .h-display, .btn, .btn-sprout, etc.).

LISTA DE CAMBIOS:

1. Eliminé los dos bloques <style> (lumi-runtime y lumi-alias-bridge) y la etiqueta <web-component>, que eran del visor donde se generó el código y no del sitio.
2. Agregué la estructura de documento que faltaba: <!DOCTYPE>, <head>, metaetiquetas, fuentes de Google y los enlaces a styles.css e index.css.
3. Restauré las 4 imágenes del carrusel del hero, que habían quedado vacías, mediante :nth-child en el CSS.
4. Cambié <div class="page-grid-layout"> por <main> para mejorar la semántica.
5. Agregué clases para ubicar los elementos en el grid: story-section, explore-section, cta-section, explore-layout, explore-head, card-flora, card-fauna, card-actividades, card-educacion y las clases de las columnas del footer.
6. Moví el JavaScript a index.js y quité la referencia a common.js para que el menú no se active dos veces.

CODIGO ORIGINAL

```
<style id="lumi-runtime">/* luminous.css */
```

```
/*
```

```
* Luminous runtime stylesheet — injected once into every generated widget's
```

```
* <head> by the C++ widget agent (id="lumi-runtime"). Single Source of Truth
```

```
* for ALL design tokens and pre-baked .lumi-* component classes. The SI prompts
```

```
* (design.md / html_generation.jinja2 / chart.jinja2) must NOT re-declare these
```

* tokens or component CSS; they only reference them.

*

* Sections:

* 1. Web fonts (Google Sans Flex + Google Sans Code)

* 2. Light token :root (from previewer tokens.css, verbatim)

* 3. Dark token overrides — REMAPPED to :root so canvas/D3 readers of

* `getComputedStyle(document.documentElement)` resolve dark values (D3).

* 4. Short diagram/chart aliases (bridge legacy `--surface` / `--chart-N` names).

* 5. In-scope pre-baked `.lumi-*` component classes.

*/

/* =====

* 1. WEB FONTS (Google Sans Flex + Google Sans Code only)

* Material Symbols Outlined is intentionally NOT loaded: no in-scope

* `.lumi-*` control has a functional CSS glyph dependency on it, and the

* icon ban forbids decorative icons (Decision D2).

* ===== */

</style><style id="lumi-alias-bridge">/*

* Legacy-alias bridge for Rich Pages interactive islands.

*

* The Rich Pages system instruction tells the model to colour islands with a
* 15-name alias vocabulary (--text-primary, --bg, --border, ...), each written
* as `var(--name, #hex)` with a mandated readable fallback. The Luminous
* runtime defines only two of those names (--accent, --accent-container), so
* injecting the runtime alone would leave every other alias resolving to its

```

- * hardcoded hex -- no theming, and a widget that is half Luminous and half
- * hardcoded.
- *
- * This maps the remaining legacy aliases onto Luminous tokens so existing
- * island output themes correctly with no system-instruction change. It stays
- * useful after the SI moves the model onto canonical Luminous names, because
- * older conversations replay through the same renderer.
- *
- * Loaded after the Luminous runtime, which defines the right-hand sides.
- * See go/rich-pages-design.
- */

```
:root {  
  /* Text. Luminous has no third text tier; --text-tertiary shares the variant  
    tone rather than inventing an unthemed value. */  
  --text-primary: var(--on-surface);  
  --text-secondary: var(--on-surface-variant);  
  --text-tertiary: var(--on-surface-variant);  
  /* Surfaces. */  
  --bg: var(--surface);  
  --bg-card: var(--surface-container);  
  /* Lines. --grid is chart gridlines, which want the same hairline as a  
    border in this palette. */  
  --border: var(--outline);

  /* Status. */  
  --success: var(--positive);
```

```
--success-container: var(--positive-container);

--danger: var(--error);

--danger-container: var(--error-container);

/*

* --warning / --warning-container are deliberately NOT mapped: Luminous
* defines no warning role, and borrowing --error would render a caution as
* an error. They keep falling through to the SI-mandated fallback hex, which
* that instruction already requires to be legible on both light and dark
* backgrounds. Map them here if Luminous gains a warning token.

*/

}

/*

* --accent is the one name both vocabularies define and disagree on. The
* system instruction uses it to colour values, emphasis and chart strokes, so
* it has to be legible ON a surface. Luminous uses it for a surface tint:
* #9dd2ff in light, #1f3b9b in dark. Inheriting the runtime's value therefore
* makes accented text and SVG strokes *less* readable than the hardcoded
* fallback they replace -- pale blue on white, dark navy on near-black.

*

* Re-point it at --primary, the legible theme-aware accent (#3186ff light,
* #9dd2ff dark). --accent-container is deliberately left inherited: there the
* two vocabularies agree, both meaning a tinted container background.

*

* Repeated across the runtime's own theme selectors because those outrank a
* bare :root. --primary already flips by theme, so the declaration is
* identical in each. Keep in sync with the dark blocks of luminous.css.
```
